EDIT MODE

## 2. Accomplishments

We make a list of tasks at the start, where the students' needs to make a plan for their assignment. Here they can keep track of their accomplishments. and see if they follow their plan. Everything is public so the students, so they are holding each other accountable.

## Ownership

The students are free to change parts of the assignment for their own. They

## 1. Epic Meaning

All the students to the same task and need to be able to help each other. They are a part of a class and therefore something larger than themselves. They need to release the game to the public afterwards so they need to make a product that they are proud to present

## Epic Meaning

I give the students to the same task and need to be able to talk to each other. They are a part of a class and work together before something larger than themselves. They need to release the game to the public afterwards so they have to make a product that they are proud to present

## 3. Empowerment

The assignment is very open, they have freedom to make their own rules and change it to be their own. They can be creative with the design and game features. We meet each day to discuss our progress and the students give each other feedback. At the end I give the students written feedback on their assignment.

## 5. Social Influence

We use GitHub as a social media hub for our code. Everything is public and available. We meet daily to discuss and

Here they can keep track of their accomplishments. and see if they follow their plan. Everything is public so the students, so they are holding each other accountable.

#### 4. Ownership

The students are free to change parts of the assignment for their own. They plan their own day and way to conquer the assignment. They will publish the game in the end, so they have to be proud of their own accomplishment.

#### 6. Scarcity

need to make a product that they are proud to present

creative with the design and game features. We meet each day to discuss our progress and the students give each other feedback. At the end I give the students written feedback on their assignment.

### 5. Social Influence

We use GitHub as a social media hub for our code. Everything is public and available.

We meet daily to discuss and show our work.

### 7. Unpredictability

I will try to have all information for the assignment in

Students are free to change parts of assignment for their own. They do it on their own day and way to conquer assignment. They will publish the assignment at the end, so they have to be proud of their own accomplishment.

### 6. Scarcity

There is a deadline for the assignment, and they need to meet the deadline and MVP to pass the class.

### 8. Avoidance

Closely related to scarcity, if they don't succeed they have to take the course again and won't progress.

### 7. Unpredictability

I will try to have a surprise at the start so there are surprises and bugs. I value crudity and I value crudity fairly low and I value crudity fairly low and I value crudity fairly low. So I expect a lot of surprises and a better and more

### 8. Avoidance

Closely related to scarcity, if they don't succeed they have to take the course again and won't progress.

### 7. Unpredictability

I will try to have all information for the assignment in the start so there are no surprises during the assignment. In software engineering and learning there is enough surprise and a bottleneck.

I value crudity very highly, the MVP of the product is fairly low and could be done in 1/4 of the time given. So I expect a lot of curiosity from the students to make a better and more creative product.

We use GitHub as a social media hub for our code. Everything is public and available. We meet daily to discuss and show our work.
